

Results checking

There are different ways to enter the results in Engarde: directly from Engarde, from an Auxiliary Engarde, by connecting a piste apparatus or with Engarde Smart.

To secure the results, the management team can lock the results in Engarde, i.e. no result can be changed unless it is modified directly from the Engarde session currently managing the competition.

Locking is applied to a finished pool or a finished match of a tableau by clicking on the  button. A window enables choosing between “modifiable”, “locked” and “checked”.

It is better to lock the result before checking to avoid any change at that time. Once the results are checked, the status of the match can be set to “checked”. Then the pool or the match is displayed with a new icon and a new background color so that checked pools or matches can be easily spotted out.

For the pools, gauges indicate the percentage of finished, locked or checked pools.

 Modifiable

 Locked

 Checked

Even if they are optional, these checking features are strongly recommended because they enable a safe control of the results and a better management of the results checking operations. They are very highly recommended when using Engarde Auxiliary or Engarde Smart, or when the piste apparatuses are connected because in these cases it ensures that the checked results will not be modified by the external source.
